

Important Update on Product Code (+ Carton Badge)

As part of the Isofield ERP (Enterprise Resource Planning) system enhancement and digital transformation efforts, in early 2027 we will be implementing a barcode management system to enhance inventory accuracy, product traceability, and overall operational efficiency.

In line with this initiative, Isofield will undertake a product coding convention exercise across all our products for better system integration, maintenance and traceability. This improvement will result in product codes expressed in a clearer format: refer to the list attached.

Please note that there will be no changes to the product specifications; only the product code on the following documentation will be updated accordingly:

- 1) Certificate of Analysis (COA)
- 2) Certificate of Conformance (COC)
- 3) Certificate of Processing (COP)
- 4) Packing List, Delivery Order & Invoice.

The improved product codes will take effect in early October 2026. To ensure a smooth transition, we kindly request that you update your purchasing, inventory management, and accounting systems accordingly once the new codes become effective.

Examples of the revisions are as follows:

Example1:

Product Name: ISOFIELD ECLIPSE	
Product Code	
Before: 2044090	After: 20440 90
There are no spaces between the numbers	There is space between "20440" and "90".

The product code format has been revised from 2044090 to 20440 90 to clearly distinguish the product number from the size number.

Example 2:

Product Name: ISOFIELD HORIZON COVERALL WITH MANDARIN COLLAR	
Product Code	
Before: 80820S	After: 80820 S
There are no spaces between the numbers and "S"	There is space between the numbers and "S".
Product Code	
Before: 80820XXXL	After: 80820 3XL
There are no spaces between the numbers and "XXXL"	There is space between the numbers and "3XL".
	The XXXL change to 3XL

The product code format has been revised from 80820S to 80820 S to clearly distinguish the product number from the size number.

"XXXL" has been changed to "3XL" to provide a clearer and more standardized size identification, reducing the risk of misinterpretation and ensuring uniformity with common market practices.

Together with the product code changes, and as part of Isofield's ongoing commitment to environmental sustainability, we will also progressively implement updates to the carton badges across our product range. The changes on the carton badges are as follows:

- Digital IFU via QR Code:**

Each carton badge now features a QR code that provides direct access to the digital Instructions for Use (IFU). As a result, paper IFUs will no longer be included in individual carton boxes.

- MCB License Number Integration:**

In line with Malaysian regulatory requirements and to ensure full compliance with the standards established by the Malaysian Rubber Board (MRB), Isofield Sdn. Bhd.'s MRB licence number (B/05/17127) will be printed directly on the carton badge, replacing the current practice of affixing a sticker to the carton, as illustrated below.

This enhancement is intended to streamline our cartoning process, reduce material consumption, and ensure continued compliance with regulatory requirements.

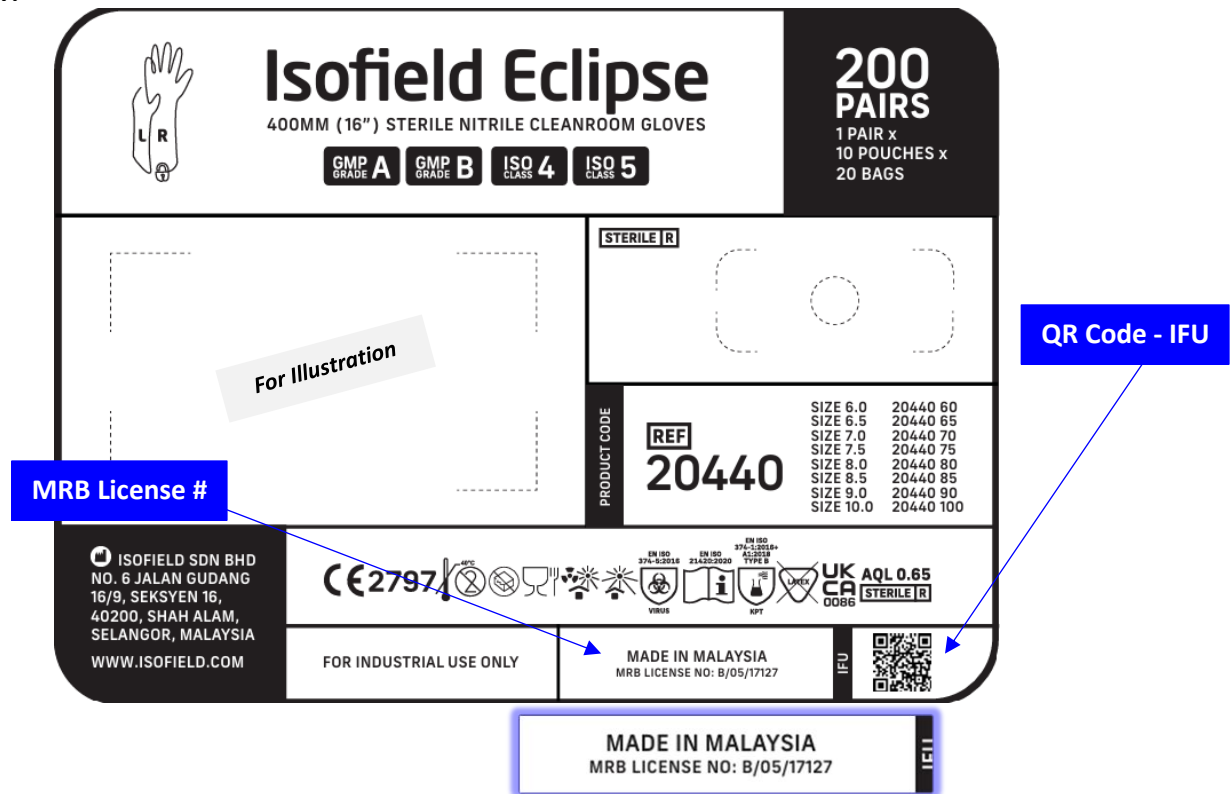

Before: (MRB Sticker on Carton)

Before: (Paper IFU inside Carton)

After:

This change will be introduced as a running change, with the revised carton badge design being phased in as current carton badge inventory is to be consumed and depleted.
